

## CONFIGURATION & EXTENSION OF MANY ASPECTS OF APPLICATION:

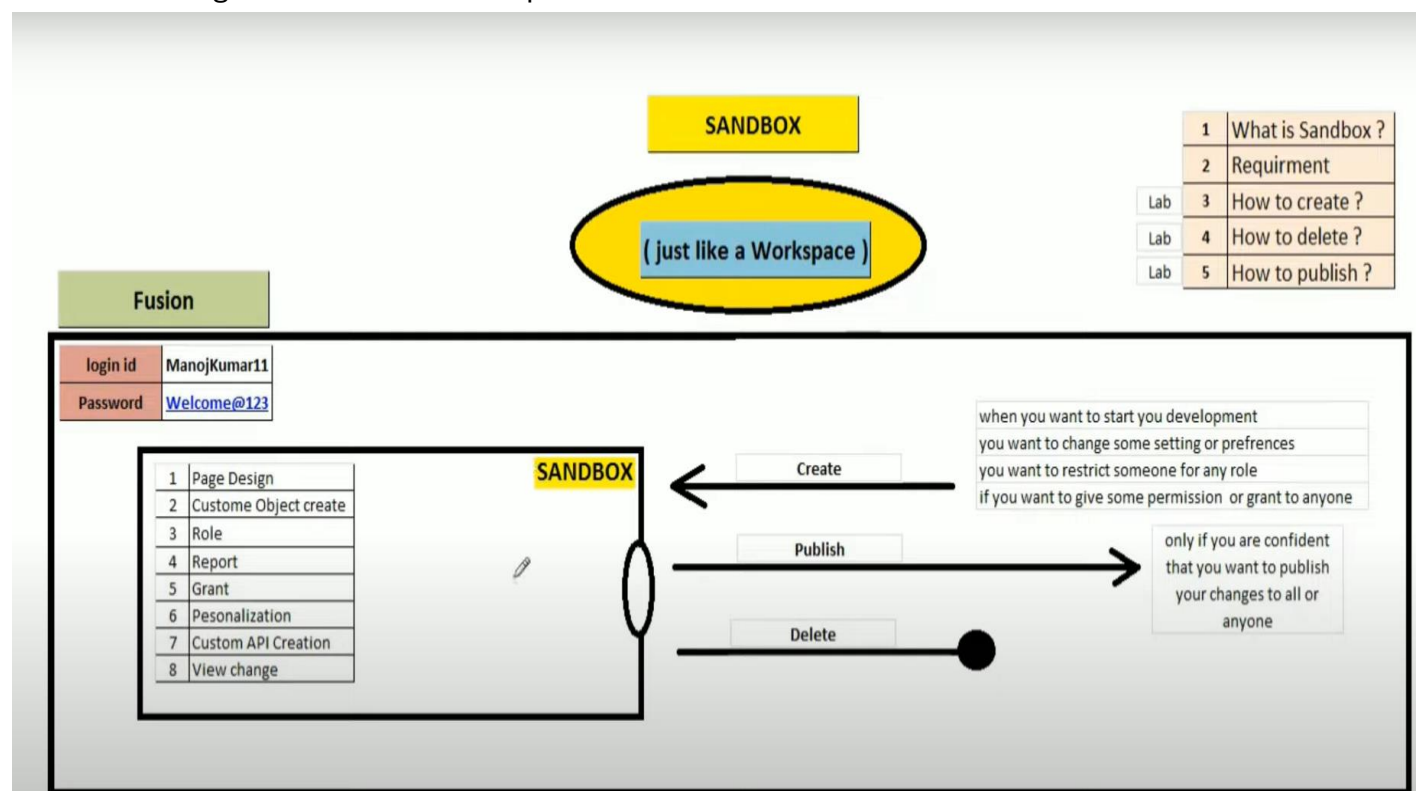

CONFIGURATION MEANS UPDATE THE EXISTING OBJECTS & EXTENSION MEANS CREATE NEW OBJECT.

### What is a Sandbox in Oracle Fusion Apps?

A **Sandbox** in Oracle Fusion Apps is a development environment where users can safely customize their application without affecting the production environment. It allows for a testing space where configuration and personalization changes can be made, tested, and validated before they are applied to the live system.

### Benefits of Using Sandboxes:

1. **Isolation:** Changes in the sandbox are isolated from the live (production) environment, ensuring no disruption of business operations.
2. **Testing:** You can test configurations and customizations thoroughly before applying them in the production environment.
3. **Faster Development:** The sandbox environment allows for quicker iterations of changes, as no downtime is needed.
4. **Safety:** Prevents unintentional errors or issues in the production environment, ensuring a more stable rollout process.

## CREATING SANDBOX:
